

ULTRA SCRAPE

Reputed to be the largest slurry scraper available in the UK, Latham Engineering's Ultra Scrape has a working width extendable from 2.2m up to 4m.

Hydraulic rams allow the width to be set to match passageway size, reducing the number of passes required.

The unit can also be reversed so that it scrapes in both directions - raising the unit allows the blades to hang vertically and the operator moves forwards or backwards to set them in the required position for the direction of travel. Price is £2995.
